Helpful Definitions: for Ribbon Judging of an Orchid Show

DEFINITIONS The following definitions are *unofficial* and are provided to give assistance in determining appropriate classification of entries. Exhibitor is responsible to be sure plants are correctly classified.

Genus: A natural grouping of closely-related species. Dendrobium is an example of a genus. The name of a genus is capitalized.

Species: A kind of plant that is distinct from other plants. It is not the product of a cross. *Species* names are not capitalized and are printed in *lower case italics*. Example *Cattleya mossiae*

Hybrid: The offspring of a cross between two different species or hybrids. Hybrid names are capitalized.

Primary Hybrid: Cross between two species of the same genus (Interspecific) or a cross of two species from different genera. Examples: B. Little Stars = B. *nodosa* x *subulifolia* or Aeridovanda Blue Spur = *Aerides lawrenceae* x *V. coerulea*

Intergeneric hybrid: A hybrid between members of two different genera - Example: Mtssa. Royal Robe = Mtssa. Erachne x Milt. Seminole Blood (*Miltonia* x *Brassia*)

Complex Intergeneric Hybrid - 'ara' indicates 3+ genera in background – Example: Howeara Lava Burst = Hwra. Mini-Primi x Rodriguez *lanceolata*
